

New Solutions For Digital Media Applications

DIGIMORE

Equinox™ ProReporter

Easily generate playback and system status reports for media players

Equinox™

ProReporter

Equinox **ProReporter** is a Window-based application that helps you to easily generate playback and system status reports for all out-of-home digital media players. It can help administrators to collect and record data, generate statements, and analyze the operation of media players.

Equinox **ProReporter** includes three parts - **Server side**, **Client side software**, and **Player**.

Client side – Allow user login to one system in server, and create and view reports belong to this system.

* There must be an internet connection on client side computer so the client side software can login to remote server and download logs from server.

Server side – Store player list, files list, and playback log of each player in a database.

Player – Create log of playback and send one log file to the server every day.

■ Features

▶ ProReporter Software is a windows application which can be run on a Windows operating system.

* The computer must have .Net framework 3.5 installed before running this software.

▶ ProReporter utilizes a local standalone database to store playback log data, and creates the playback report locally.

▶ User can choose which player and what time period of the report to update, thus reducing the amount of log files to be loaded from the remote server.

Filter By

Player

PlayerName	LocationName
Carstar Branford	Inside Out Media01
Gladstone01	Inside Out Media01
Kearny Lake	Inside Out Media01
Milcove01	Inside Out Media01
test-player	Inside Out Media01
Tsuro	Inside Out Media01

2009-12-21 22:00:17.5	1:30	720	720	1280	720
2009-12-21 22:00:07.5	1:30	720	720	1280	720
2009-12-21 22:07:56.5	1:30	720	720	1280	720
2009-12-21 22:07:46.5	1:30	720	720	1280	720

▶ ProReporter can show a detailed list of all the start times, durations, zones and monitor sizes in pixels of every playback, and produce a percentage bar chart for each day.

▶ User can export player list, file list or report to an Excel file or print out to a printer.

▶ User can see the location map of a selected player according to the player's postal code.

▶ User can check the history of database updates.

▶ User can print the data tables.
